Detailed Description :

Our project is to develop a website for online house booking for paying guests and also helps the house owners to add their house to the website with the help of Admin. This system has a various options like reservation, cancellation and refunding and adding the house into the website.

Signup/Login :

Initially the user has to create a new account with required details. If the username already exists it shows an error that the username already exists. Then the user has to use a new username to create an account. The existing user can directly login to their account with their username and password.

For User :
Reservation :

After the successful login the user gets into the website then the user can book a house. For this firstly he/she mention his/her preferences based on that the available house will be displayed. From that list he/she select or enquire a house to get more details about the house. After he/she happy with that house, he/she can book a house.

Filters - Location, gender, BHK, budget, amenities, ratings.

Payment :

For booking the house he/she may contact the house owner to get more information about a house and he/she can make an advance payment to get into the house.

Cancel the booked house : (this page will show the user's booked house)

After the payment user don't want that house because of some reasons then he/she should tell the reasons, if the reasons are valid then we have to refund the amount he/she paid for cancelling the booked house.

Remainder :

Once he/she get into the house he/she booked, he/she will get a remainder every month to pay a rent.

For Owner :
Add house :

He/she can request the admin to add their house into the website with the required information about the house that can be booked by paying guests.

For Admin :

Admin has a username and password by using that credentials admin can enter into his/her home page. Admin is the only responsible to maintain and manage the details about the user and house, And also has the access to add a new house with required information and remove the fully occupied house from the website.
